

# The premier coin acceptor

Condor Premier lives up to its name

- First for performance
- First for reliability
- First for value

Combining the high-speed acceptance of Condor Plus with the proven 'virtual sensing' technology of our SR series, Condor Premier has been developed specifically to meet the demands of casino slot machines.

# Condor Premier

With exceptional speed, security and reliability, Condor Premier is leading the way in coin and token acceptance for casino operators and machine manufacturers.

## High discrimination

Money Controls' unique patented circuitry rapidly samples multiple sensors to obtain detailed readings from all areas of a coin using an array of small, precision inductive sensors. This means that Condor Premier takes more coin readings at more frequencies over more areas, resulting in an extremely high level of coin discrimination.

## High-speed, high performance, high reliability

Condor Premier accepts up to an amazing ten coins or tokens per second — fast enough for even the most dedicated of slot players. And this high-speed is allied with an advanced anti-jamming mechanism for high performance and high reliability.

## Global unit

There's only one Condor Premier: it's a truly global product, with the same unit able to handle up to 95% of the world's coin sets. This simplifies ordering, design and manufacturing procedures for OEMs, as well as reducing stockholding requirements.

## Single-coin or multi-coin

Condor Premier can be configured to accept a single coin or up to 12 different ones, enabling compliance with local jurisdictional requirements. Single-coin acceptance can be based on the data of just one coin permanently locked in or can be selected, using ccTools, from one of a range of coins pre-set during factory programming. This versatility makes life easier, and more economical, for both operators and OEMs.

## Technical Data: Condor Premier

### GENERAL

Coin Size	Diameter mm: 15 to 44.5 Thickness mm: 1.5 to 3.75
Compatibility	Backward compatible with equivalent acceptors (subject to application testing). Please contact Money Controls for further details
Bezel Options	Money Controls' bezel ranges
Operational Specification	Up to 10 coins or tokens per second Single-coin or multi-coin acceptance
Communications Interfaces	Casino standard parallel ccTalk serial (RS232-based)
Optional Features	Self-check diagnostics on power-up Alarm activation – anti-stringing, opto block, incorrect sequencing Two-way diverter Choice of 'direct accept' or 'reverse accept' paths
Power	12V to 24V dc (min: 11V, Max: 32V) 50 ma typical; 500 ma Max.
Environmental	Temperature range: Operating 0°C to 60°C Humidity range: Operating 10% to 75% RH nonconducting

### Key Features:

- Excellent fraud discrimination
- Highest levels of performance and security
- Fast acceptance – up to 10 coins per second
- Factory-quality field programming
- Coin acceptance can be factory-set to jurisdictional requirements
- Global design
  - accepts 95% of world's coin sets
  - reduced lead times, stockholding and costs
  - international and state Gaming Board approvals
- Choice of interface
  - casino standard parallel interface
  - ccTalk serial interface
- Backward compatible with equivalent coin acceptors
- Single-coin or true multi-coin acceptance
- Comprehensive diagnostics and alarm reporting via ccTalk.
